

## ABSTRACT OF THE DISCLOSURE

A film reading image device includes a data generation device to generate index display setting field data by receiving output from an image reading device.

5 The film reading image device further includes a size data  
obtaining device to obtain size data of the monitor screen  
of the host apparatus and a control device to set the  
reading resolution based on the relationship between the  
number of frames to be index displayed on the monitor  
10 screen of the host apparatus and the size data obtained.  
The image reading device executes conversion operations  
with the resolution set.
